If you have any favorite stickers or packages, don't hesitate to share them in the comments. If you install the package something, take the stickers to WhatsApp and then uninstall it, it disappears. WhatsApp must store stickers in a folder for them to be grouped together. If you don't want to fill the screen with sticker applications, you can put them all in a folder or, if the launcher allows, hide them. Navigating through them to find one you want can be tedious, so we've collected some of the best packages to make it easier for you. Event Stickers2: Available for Android and iOS on MediaFire. Note that stickers are installed as if they were third-party applications, so you should be very careful about the permissions they ask you to install. If we uninstall the applications that include them, it disappears.
